About ScreenCheck

ScreenCheck is the trusted distributor of advanced security and identity management solutions across the Middle East and Africa. With over 20 years of experience and as one of the few distributors in the region offering an extensive range of products, we have earned a reputation for combining global expertise with deep industry insights. We offer a unique blend of top-tier products, customised solutions, value-added services, and continuous innovation. Today, as MENA's leading value-added distributor, we empower organisations with offerings from the world's leading brands, exceptional services, and ongoing support.

Distribution with a difference

Our partnership with the world's leading brands to distribute their products and solutions in the Middle East has been highly successful. Today, most of the physical security and identity projects in the country rely on the products we distribute. We have more than 300 established channel partners who add value to our products by packaging and delivering them as a total solution to the customers to meet their requirements.

Our Core Strengths

- **Pre-sales support**
- **Local support availability**
- **Fastest delivery**
- **Partner training**
- **Optional testing and commissioning**

Our dedication to innovation and excellence has allowed us to continuously adapt to the dynamic market. We invest heavily in research and development to ensure that the products and solutions we distribute remain at the forefront of technology, providing state-of-the-art security and identity solutions.

ACCESS CONTROL & ATTENDANCE MANAGEMENT

suprema

Global leader in Biometrics

Suprema is a global leader in biometric access control, time and attendance, and mobile authentication solutions. Their product range includes advanced fingerprint scanners and embedded modules, solidifying their position as a top biometric technology provider. They have a presence in over 140 countries and are a leader in the EMEA market in biometric access control. Suprema continues to set industry standards by integrating AI and IoT technologies into its biometric solutions, enhancing security and user convenience. With a commitment to innovation, they offer scalable solutions tailored to enterprises of all sizes, ensuring superior access control and time management.

Advanced Iris Recognition Systems

CMI Tech specialises in advanced iris recognition technology, providing unparalleled security in biometric identification. Their high-speed, accurate scanners are ideal for access control and identity verification applications. Their iris recognition devices are designed for both indoor and outdoor use, making them versatile for various security environments. Their solutions are globally recognised for combining high-speed performance with low false acceptance rates, ensuring unmatched accuracy. Offering the highest ease of use, superior image quality, and fast capture speeds, CMITech's suite of products supports a full range of advanced iris recognition solutions for the global secure identification market.

TANlock®

Intelligent Access Control System

Founded in 2018, FATH Mechatronics GmbH specialises in developing, producing, and marketing innovative mechatronic products. Its flagship product, TANlock, is an intelligent electromechanical locking system designed for server racks, control cabinets, and both indoor and outdoor racks. Offering interchangeable authentication modules for customisation, TANlock provides enhanced security for critical IT infrastructure. It is widely utilised across data centres, healthcare, industries, consulting firms, and public sectors to ensure secure and efficient access control for sensitive environments.

Iris on the move

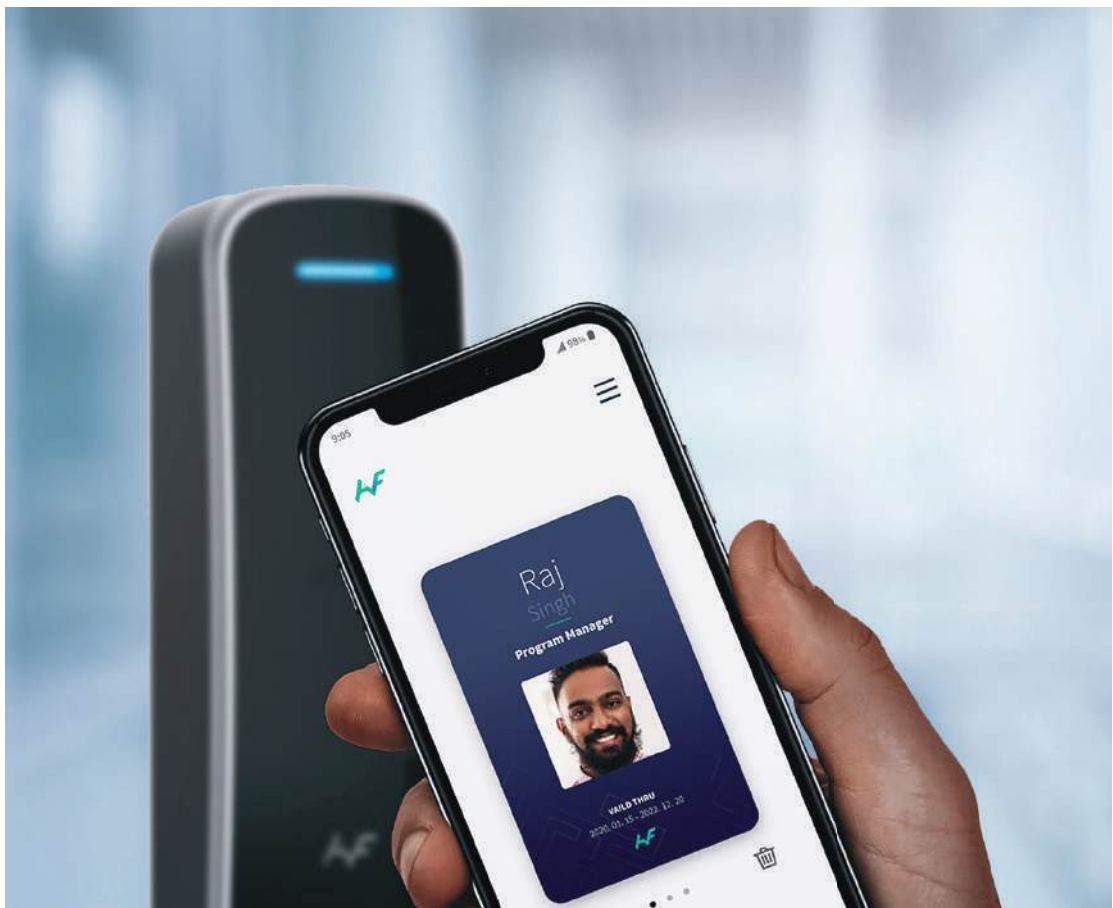

Princeton Identity enhances security with its cutting-edge biometric identity management solutions, utilising iris recognition and other advanced technologies to offer unparalleled accuracy, reliability, and convenience. Their versatile authentication solutions cater to a range of physical security and access applications, including mobile access control, corporate environments, industrial and secure workplaces, airports, critical infrastructure, public arenas, and border control. With proven installations worldwide, they provide seamless integration for enhanced security, helping organisations streamline operations and ensure the highest level of protection.

100% cloud & mobile based access

MOCA System, known for its Airfob platform, revolutionises access control with its mobile-first, 100% cloud-based solutions. By integrating physical spaces with the online world, MOCA System enhances experiences for employees, members, and guests while streamlining business operations. With its scalable, cloud-based approach, the MOCA System supports over 13,000 sites globally, offering a seamless, cardless access solution. The system's flexibility and ease of use ensure efficient management of access permissions, reducing administrative overhead and providing real-time insights into access patterns. MOCA System's commitment to innovation makes it a leading choice for modern, secure access control.

Intelligent electronic controllers for smart access

IDtech, a top Belgian provider, specialises in access control and time management solutions for businesses of all sizes. With a legacy spanning over 35 years since its establishment in 1985, IDtech brings extensive experience and technical expertise to a diverse range of industries, from public sector facilities to global multinationals. Their comprehensive solutions, including customisable software and high-quality hardware, ensure that organisations can effectively manage their security and operational needs. IDtech's commitment to innovation and customer satisfaction drives its ongoing development of cutting-edge technologies tailored to evolving industry demands.

Advanced Vehicle access control

Nedap Identification Systems has been a front-runner in automatic vehicle identification for over 30 years. Specialising in vehicle access control, Nedap addresses a wide range of challenges with solutions designed to seamlessly identify vehicles and their drivers, enhancing security, parking, and traffic management worldwide. Their extensive product portfolio includes high-performance long-range RFID and licence plate recognition systems. Nedap's solutions are engineered for precision and reliability, ensuring optimal entry and exit experiences while significantly reducing congestion at access points. Their technology supports efficient and secure management of vehicle access across diverse environments.

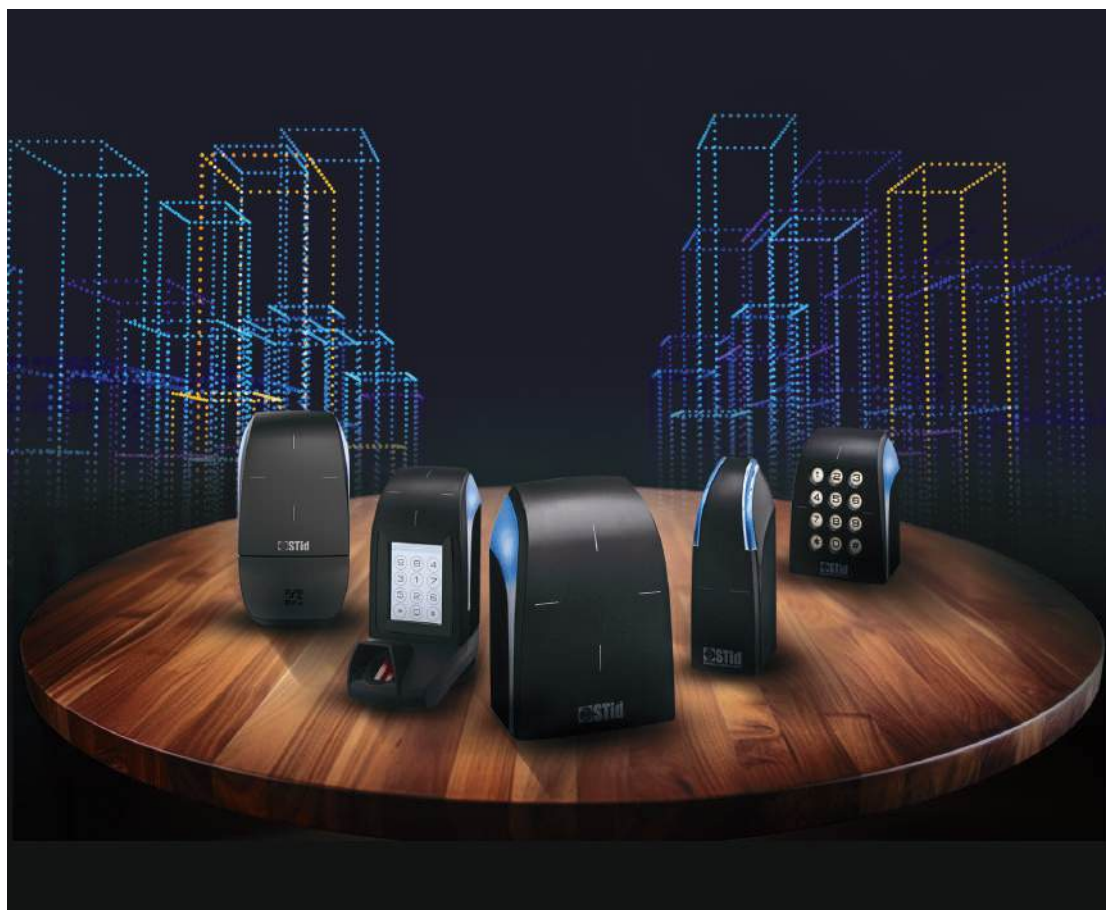

Access Control Accessories

Endura offers a range of electromagnetic locks and access control accessories meticulously engineered to provide unparalleled durability and security, even in the most demanding environments. Endura's comprehensive product range includes shear locks, electric bolts, electric strikes, high-security motor-driven electric locks, exit buttons, and electromagnetic door holders. Built to withstand the toughest security challenges, Endura products provide the highest level of safety through robust construction and cutting-edge technology. Their electromagnetic locks are designed to resist tampering, impact, and environmental stress, ensuring reliable performance and protection for critical access points. By focusing on exceptional build quality and rigorous testing, Endura ensures that its products meet the highest standards of security and durability.

Lock Down Peace of Mind

STid offers advanced contactless identification solutions using RFID, NFC, and Bluetooth® technologies, along with the Internet of Things (IoT). For over 20 years, they have been inventing smart solutions designed to secure access and provide traceability for assets in testing environments such as the aeronautical, energy, and defence sectors. As experts in their field, they are constantly striving for excellence, giving them an unrivalled command of cutting-edge technologies to safeguard digital identity. They provide companies, industries, and governments with the means to identify, protect, and supervise their assets, making daily operations easier and safer. STid's advanced technology ensures secure, efficient, and reliable identification processes that meet the highest standards of security and operational efficiency.

CREONE

Intelligent management of keys and valuables

Creone is a leading provider of intelligent key and valuable management systems, offering secure, traceable and user-friendly access to physical assets. With IoT- enabled product lines like KeyBox, KeyRack and ValueBox, the products integrate with the cloud-based platform KeyWin to improve operational efficiency.

Used in sectors such as defense, healthcare, transportation, car dealerships and property management, the platform is built for flexibility and scalability. Customers can grow from a few keys to thousands, or from a single cabinet to multiple units across various locations.

With partners in over 50 countries, Creone continues to grow globally. Backed by Swedish engineering and decades of experience, they deliver future-ready solutions for securing critical access.

ID CARD ISSUANCE

Card printing re-defined

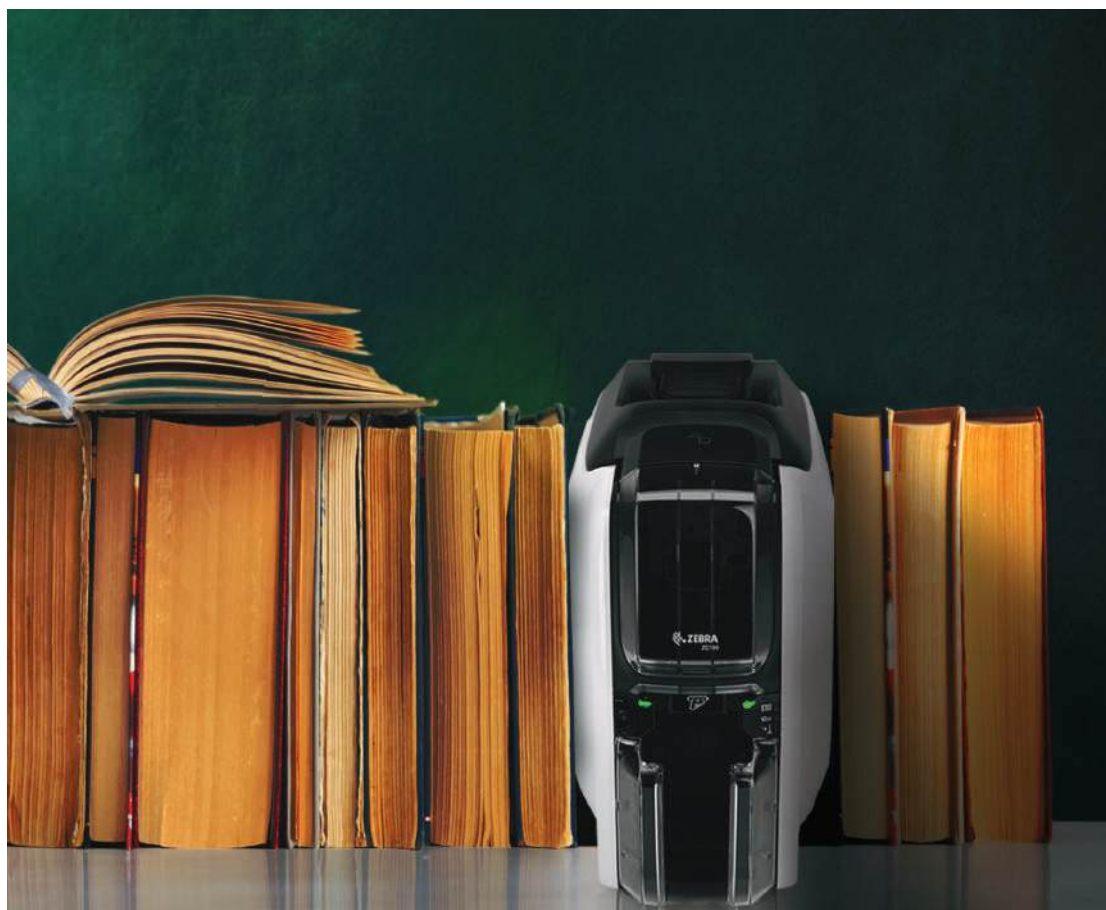

Bravo Global delivers top-tier retransfer printers and laminators renowned for secure verification and identification. Leveraging decades of industry expertise, Bravo Global provides cutting-edge solutions that excel in security and performance, setting the standard for top-tier identity management. Bravo's retransfer technology ensures flawless card printing, with vivid, high-resolution images and enhanced durability. They also offer a range of secure encryption features, ensuring that all identification credentials remain tamper-proof and secure.

Card printer for every need

Zebra empowers organisations with intelligent hardware and software that ensure total operational visibility. Their innovations in scanning, mobile computing, and automation streamline workflows, connecting everything for optimised performance. With over 50 years of expertise, Zebra offers a comprehensive range of mobile computers, printers, barcode scanners, and RFID solutions. Their products deliver exceptional image quality that is both efficient and cost-effective, enhancing performance across various applications. From handheld devices to warehouse automation, Zebra's solutions provide complete, real-time data insights that drive operational excellence, helping businesses make smarter decisions faster.

Instant ID simplified

Entrust is a pioneering force in identity-centric security solutions, offering a comprehensive platform of scalable, AI-enabled security technologies. With a global presence in over 150 countries and a robust network of partners, Entrust is a trusted choice for the world's most reputable organisations, ensuring they evolve and safeguard their digital environments with confidence. Their cutting-edge solutions encompass encryption, credential issuance, and secure communications, providing unmatched reliability and adaptability in today's interconnected world. Entrust continues to drive innovation, empowering businesses to thrive securely in the digital age.

The leader in card printing solutions

Renowned for setting global standards in decentralised card printing, Evolis offers advanced card personalisation technologies. Their products include software, signature pads, and accessories, supporting secure identification across various sectors. Evolis sets the global standard in decentralised card printing and stands out for its eco-friendly approach, offering energy-efficient printers and recyclable consumables. Their advanced printing technologies support the highest level of personalisation, making them a trusted choice for businesses and governments worldwide.

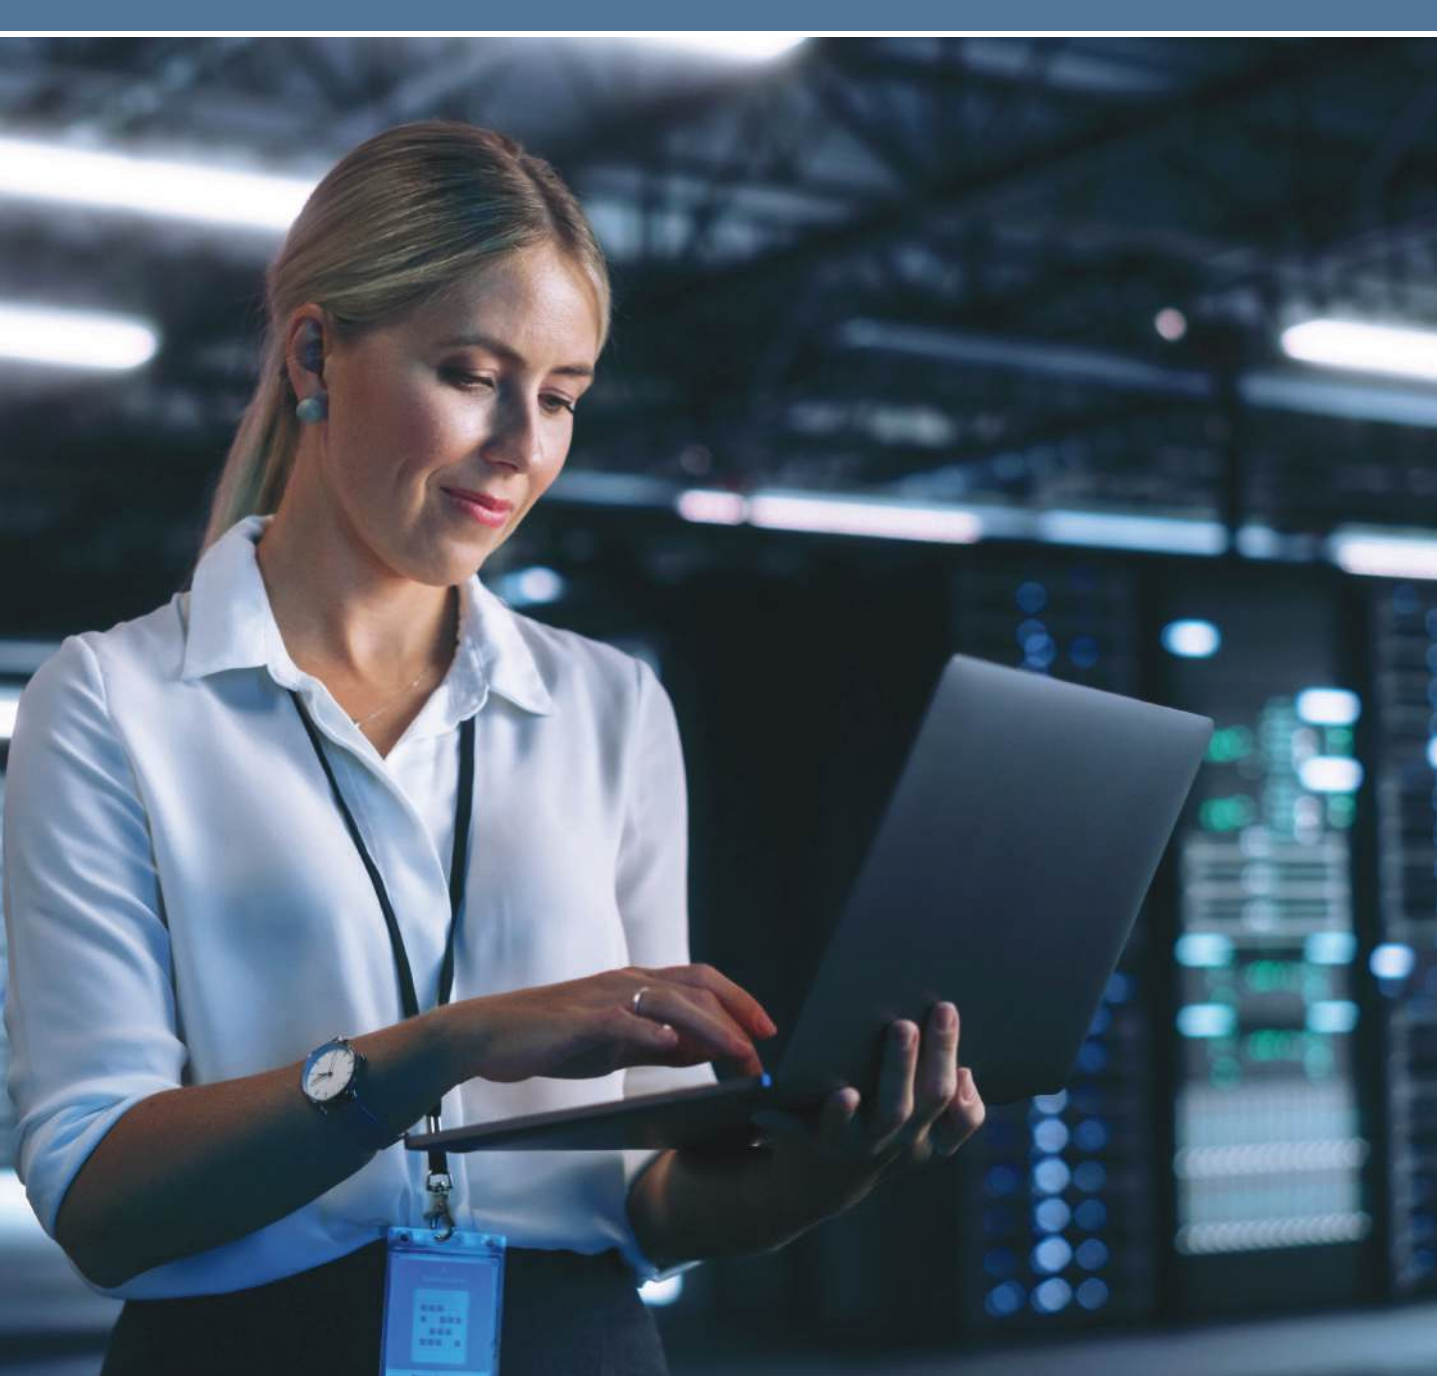

Ultimate software for your card printing

With over 30 years of experience in the ID card industry, cardPRESSO has become a key player in delivering innovative solutions that bridge traditional technology with emerging market trends. Their expertise has led to the development of software tools that meet the evolving needs of businesses globally, offering integrated solutions designed for both functionality and ease of use. Present in over 93 countries, they focus on delivering high-quality software that empowers users to efficiently manage their ID card production. Driven by a dedicated team of developers, analysts, and customer feedback, cardPRESSO continues to push the boundaries of ID security and technology, ensuring customers receive the best solutions for their identification needs.

POWER BACKUP (UPS) SOLUTIONS

SALICRU

Uninterruptible Power Supply (UPS) Systems

Salicru specialises in power electronics, offering UPS systems, voltage stabilisers, and energy efficiency solutions. Their products ensure uninterrupted, eco-friendly power supply for critical environments like data centres and IT networks. They are leaders in reliable power protection. Salicru's UPS systems feature intelligent energy management software that optimises power consumption, reducing carbon footprints. Their solutions are highly reliable and adaptable, making them an essential partner for businesses aiming to protect critical infrastructures.

VISITOR MANAGEMENT SOLUTIONS

Unified Visitor Management

EvTrack stands out in offering a comprehensive visitor management and cloud access control solution, integrating various features to enhance security and streamline access. The system includes handheld guard scanning, multiple credential types, number plate recognition, QR code access control, one-time PIN generation, and support for traditional methods like biometrics and RFID cards or tags. With its user-friendly management interface and encrypted communication, EvTrack ensures secure and efficient visitor management. The flexibility of cloud-based and on-premises options provides organisations with tailored solutions to meet their specific security and operational needs, making EvTrack a versatile choice for modern access control.

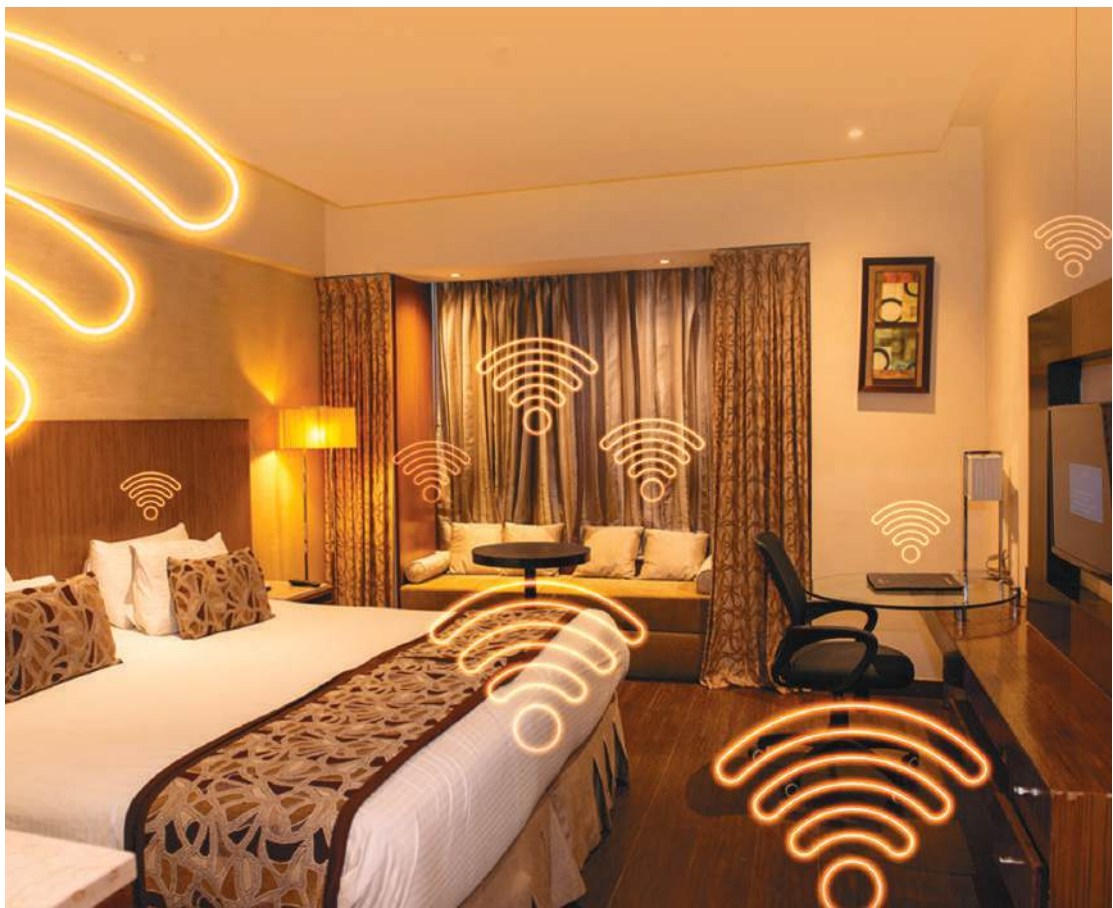

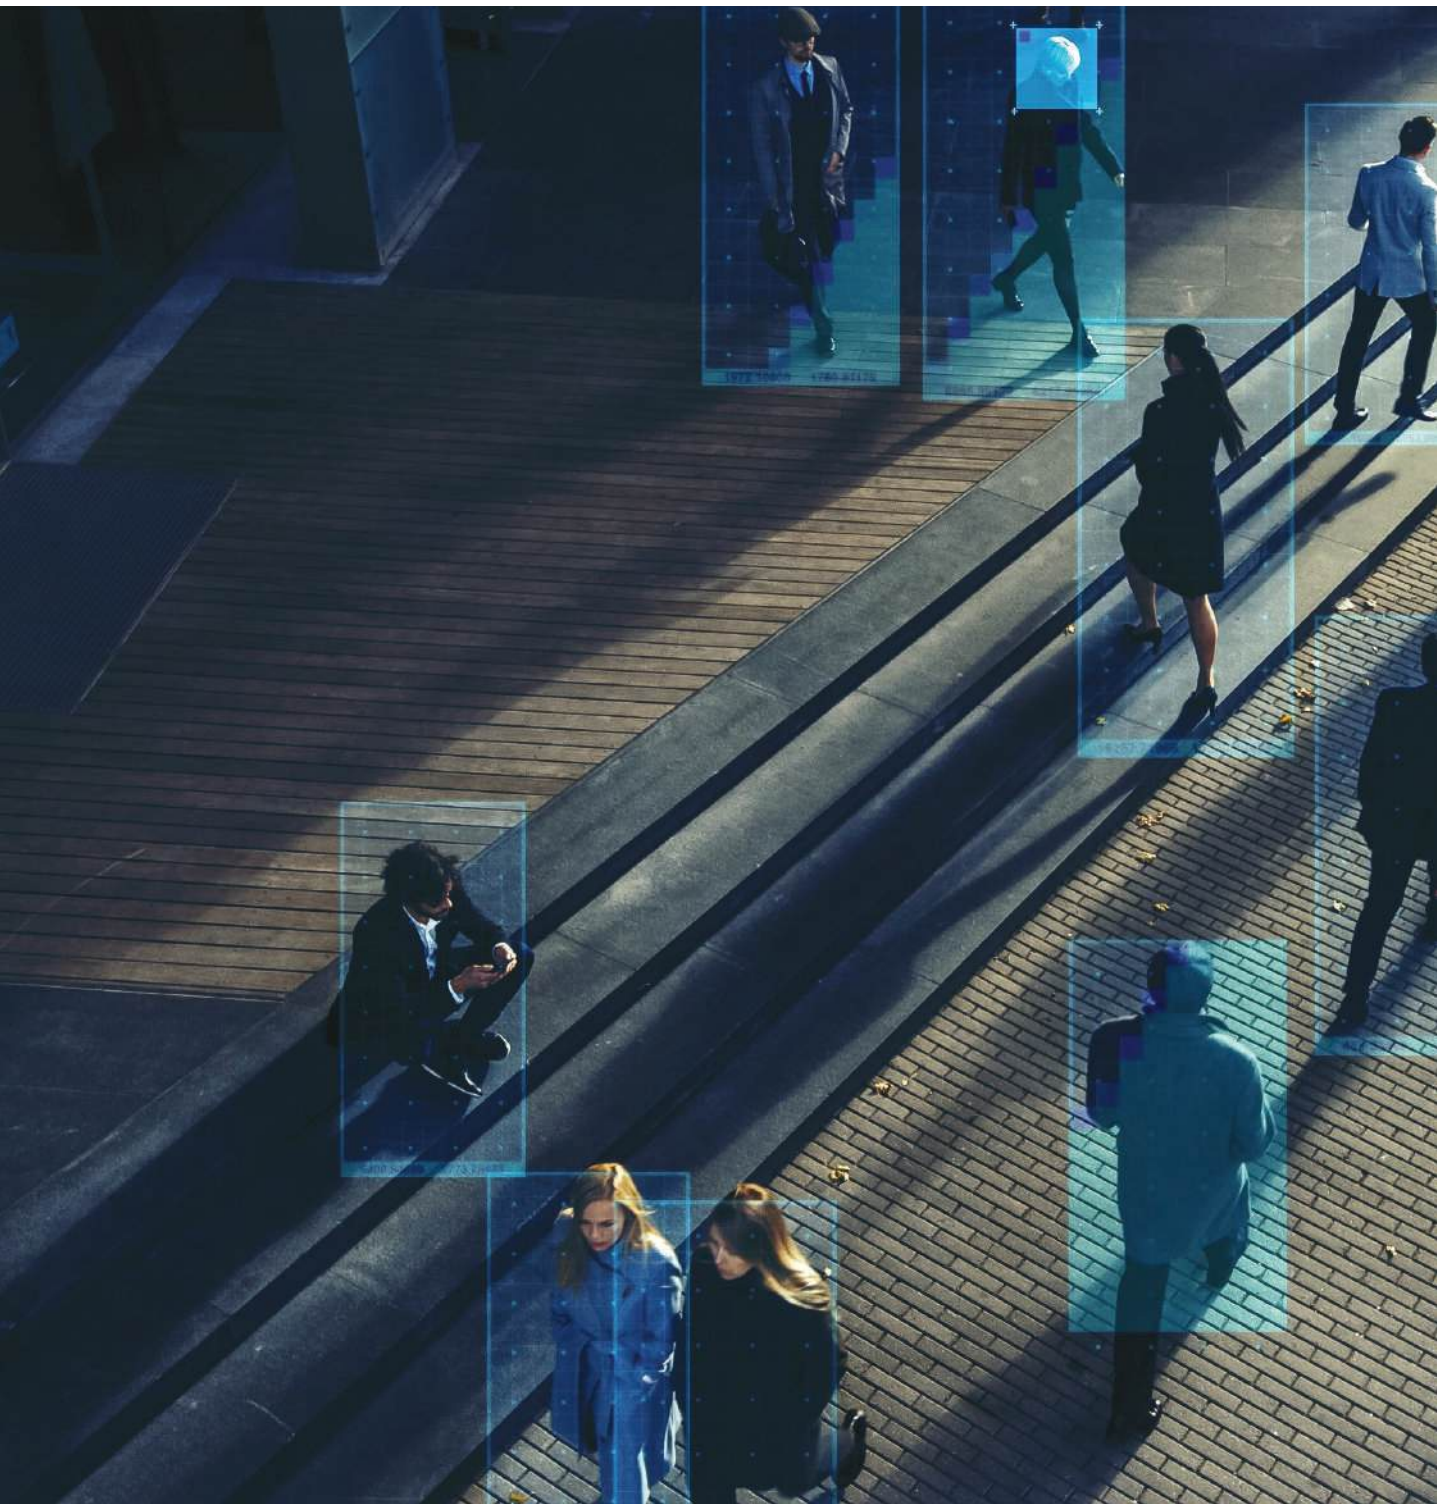

RFID SOLUTIONS

IoT Track and Trace Solutions

WOW RFID is the market leader in RFID and IoT solutions in the Middle East, serving industries such as retail, healthcare, and manufacturing. They specialise in project consultancy, system design, and RFID installations, enhancing operational efficiency with real-time data insights. WOW RFID is recognised for optimising workflows and decision-making across various sectors. WOW RFID's solutions are designed to integrate seamlessly with cloud platforms, offering real-time visibility and analytics. Their expertise extends to implementing RFID systems in harsh industrial environments, ensuring long-lasting, high-performance results.

VIDEO SURVEILLANCE SOLUTIONS

The future of pool safety

Designed with a purpose to prevent pool accidents, which are unfortunately common today, PoolScout uses advanced AI to continuously monitor your pool and generate reliable alerts based on severity levels. In emergencies, it enables rapid response within seconds. Unique to PoolScout is its ability to distinguish between toddlers, adults, and pets, sending real-time alerts before they reach the water. It is the only system that can provide critical alerts such as 'Unattended Toddler,' 'Person Underwater,' and 'Pet in Pool.' PoolScout's AI ensures 24/7 monitoring, delivering the earliest and most reliable alerts to keep your pool safe at all times.

Video surveillance and security solutions

AxxonSoft is a global innovator in Video Management Software (VMS) and Physical Security Information Management (PSIM), revolutionising the safety and security industry since 2003. Known for pioneering solutions, they integrate intelligent video analytics and cloud-based VSaaS options, offering scalable and customisable systems to meet diverse security demands. AxxonSoft's expertise spans various sectors, ensuring seamless and proactive security management. From the invention of a revolutionary video codec to pioneering smart search and AI-driven features, their commitment to innovation is unmatched. They also train neural networks to tackle complex surveillance conditions, delivering intelligent products that are easy to implement and use, ensuring operational efficiency, safety, and peace of mind.

RFID READERS AND ANTENNAS

Connect Everything to IoT

Impinj is a pioneer in RFID solutions, connecting billions of everyday items to the Internet through RAIN RFID technology. Their platform enhances asset tracking and inventory management, driving digital transformation across various industries. Impinj's RAIN RFID technology delivers end-to-end visibility, transforming the way organisations monitor and manage assets. Their advanced solutions support automation and improve efficiency, driving digital innovation across global supply chains.

High Performance RFID readers & Antennas

Brady Corporation leads the market in safety, identification, and compliance solutions, known for its advanced manufacturing capabilities and innovation. With a legacy dating back to 1914, Brady offers high-performance products such as labels, signs, safety devices, and software, all designed to enhance safety, security, and productivity across electronics, telecommunications, aerospace, and more. Their solutions include fixed readers, handheld readers, antennas, wearables, active tracking, and customisable RFID labels, providing comprehensive identification and tracking systems tailored to meet diverse industry needs. With a strong commitment to innovation, Brady continuously invests in R&D, bringing cutting-edge solutions like intelligent asset tracking to the market. Trusted by 88% of Fortune 500 companies, Brady's expertise in identification solutions extends to sectors such as aviation, where its products are used to identify 70% of commercial aircraft worldwide.

**TURNSTILES & SPEED GATES,
ROAD BLOCKERS,
BOLLARDS & BARRIERS**

Pedestrian Access Control

Established in 2004, DaoSafe manufactures a broad range of specialised pedestrian security products, including tripods, speed gates, and full-height turnstiles. The company integrates advanced technologies such as RFID, fingerprint access control, and more. With a focus on innovation and quality, DaoSafe offers fully customisable solutions that meet global certification standards. Their products are designed to deliver maximum security and efficiency across various sectors worldwide. Their rigorous production processes ensure high-quality standards, and their customisation capabilities are on par with, or even exceed European and American standards.

MEETING ROOM MANAGEMENT SOLUTIONS

Smart meeting work flow systems

KuiqMeeting delivers an all-in-one workspace management solution designed to streamline office productivity and optimise meeting space utilisation. Their system integrates room scheduling, usage analytics, wayfinding, visitor management, and food and beverage ordering into a seamless platform. By offering real-time insights and intuitive interfaces, KuiqMeeting enhances operational efficiency and fosters a more dynamic workplace environment. Their advanced analytics help organisations make data-driven decisions, while automated processes reduce administrative overhead. This comprehensive approach supports diverse sectors in creating smarter, more connected workplaces, driving better organisational outcomes, and improving overall employee satisfaction.
